

Plasma technology an interdisciplinary key-technology

- biomedical science
- chemistry, new materials
- printing technology
- electrical engineering
- mechanical engineering
- optics
- automotive industry
- information technology
- light sources
- textile industrie
- enviroment technology
- packaging industry

BALTICNET PLASMATEC

The combination of research, development and application

Discover the forth state of matter!

about us

BalticNet-Plasmatec is a network supporting the establishment of plasma based technology within the Baltic-Sea-Region. Co-operation between universities, industries, SME's, public institutions, user and other important actors within the plasma technology area is fostered.

Today plasma technology has many-sided areas of application!

- modification, funktionalization
- cleaning, disinfection, sterilization
- generation of light and radiation
- etching, coating
- welding, joining
- cutting, fractionizing
- switching
- visualization (displays)
- measurement, analysis, modelling

Technology transfer

Do you search for new technologies?
Do you want to develop new products?
Are you looking for optimized methods and processes?

Initiation and cooperation of development projects

partner agency for research, development and industry

acquisition and management of projects

Staff exchange

Do you search capable professional forces, or do you want offer competence to others?

training on the job (learning by doing)

continuing, postgraduate education

employment agenc for PhD students

organization of staff exchange

placement, job rotation

Marketing-management

Do you need professional marketing strategies and marketing support?

technology and marketing for new processes and products

presentation and marketing of R&D-results, service and products

event management, e.g. exebitions
